Perinatologie website — authoring context

This repository is the public perinatologie.nl marketing website. It is rendered by the Atlas viewer in public mode. Every page is a Markdown file under `content/`; the file path is the URL path.

Page frontmatter

```
---
layout: landing
title: Page title
seo:
  description: "..."
  image: /assets/img/...
---
```

Section shortcodes

Use `:::hero`, `:::features` / `:::feature-card`, and `:::cta` as documented in the Orfeus/Onatal web-atlas pattern. Homepage-specific HTML blocks (partners grid, news grid, timeline, FAQ accordion) live as raw HTML inside the Markdown and are styled in `assets/css/site.css`.

HTML in Markdown

This repo opts into raw HTML via `atlas.yaml`:

```
markdown:
  html_input: allow
```

Atlas defaults to `strip` elsewhere. Only enable `allow` on trusted public sites — it lets partner/news grids and figures render as HTML/web components.

Migration note

Content was migrated from the Strapi CMS (`strapiperi`) that previously backed `perinatologie-next`. Cookie- and privacyverklaring PDFs are stored next to their pages under `content/`.
